

PLEASE TAKE NOTICE that a balloon test will be performed at the Village-owned property located at 26 Havens Road, Assessor’s Parcel Number 105-5-2, Highland Falls, NY (the “Site”), in connection with the review of a proposal to the Village for approval to locate a wireless communications facility (the “Facility”) at the Site.

The balloon test will be conducted Saturday, February 16th at the Site, or in case of inclement or windy weather, each consecutive day thereafter including February 17th and February 18th until the balloon test is completed. The balloon shall be flown from approximately 8:00 a.m. to noon, weather permitting.

The purpose of the balloon test is to establish the approximate location and height of the Facility so that computer-generated visual renderings can be prepared from various viewpoints. The balloon test will consist of an approximately three foot diameter brightly colored balloon being floated to a tether line to a maximum height of 160 feet above ground level.

The below viewshed map identifies the viewpoints (orange icons) from which photographs will be taken. The blue areas show where partial direct visibility may be possible based on computer modelling.
